VIDEO CALL-BASED LOAN ONBOARDING

AGENTIC AI

Poonawalla Fincorp

PROBLEM STATEMENT

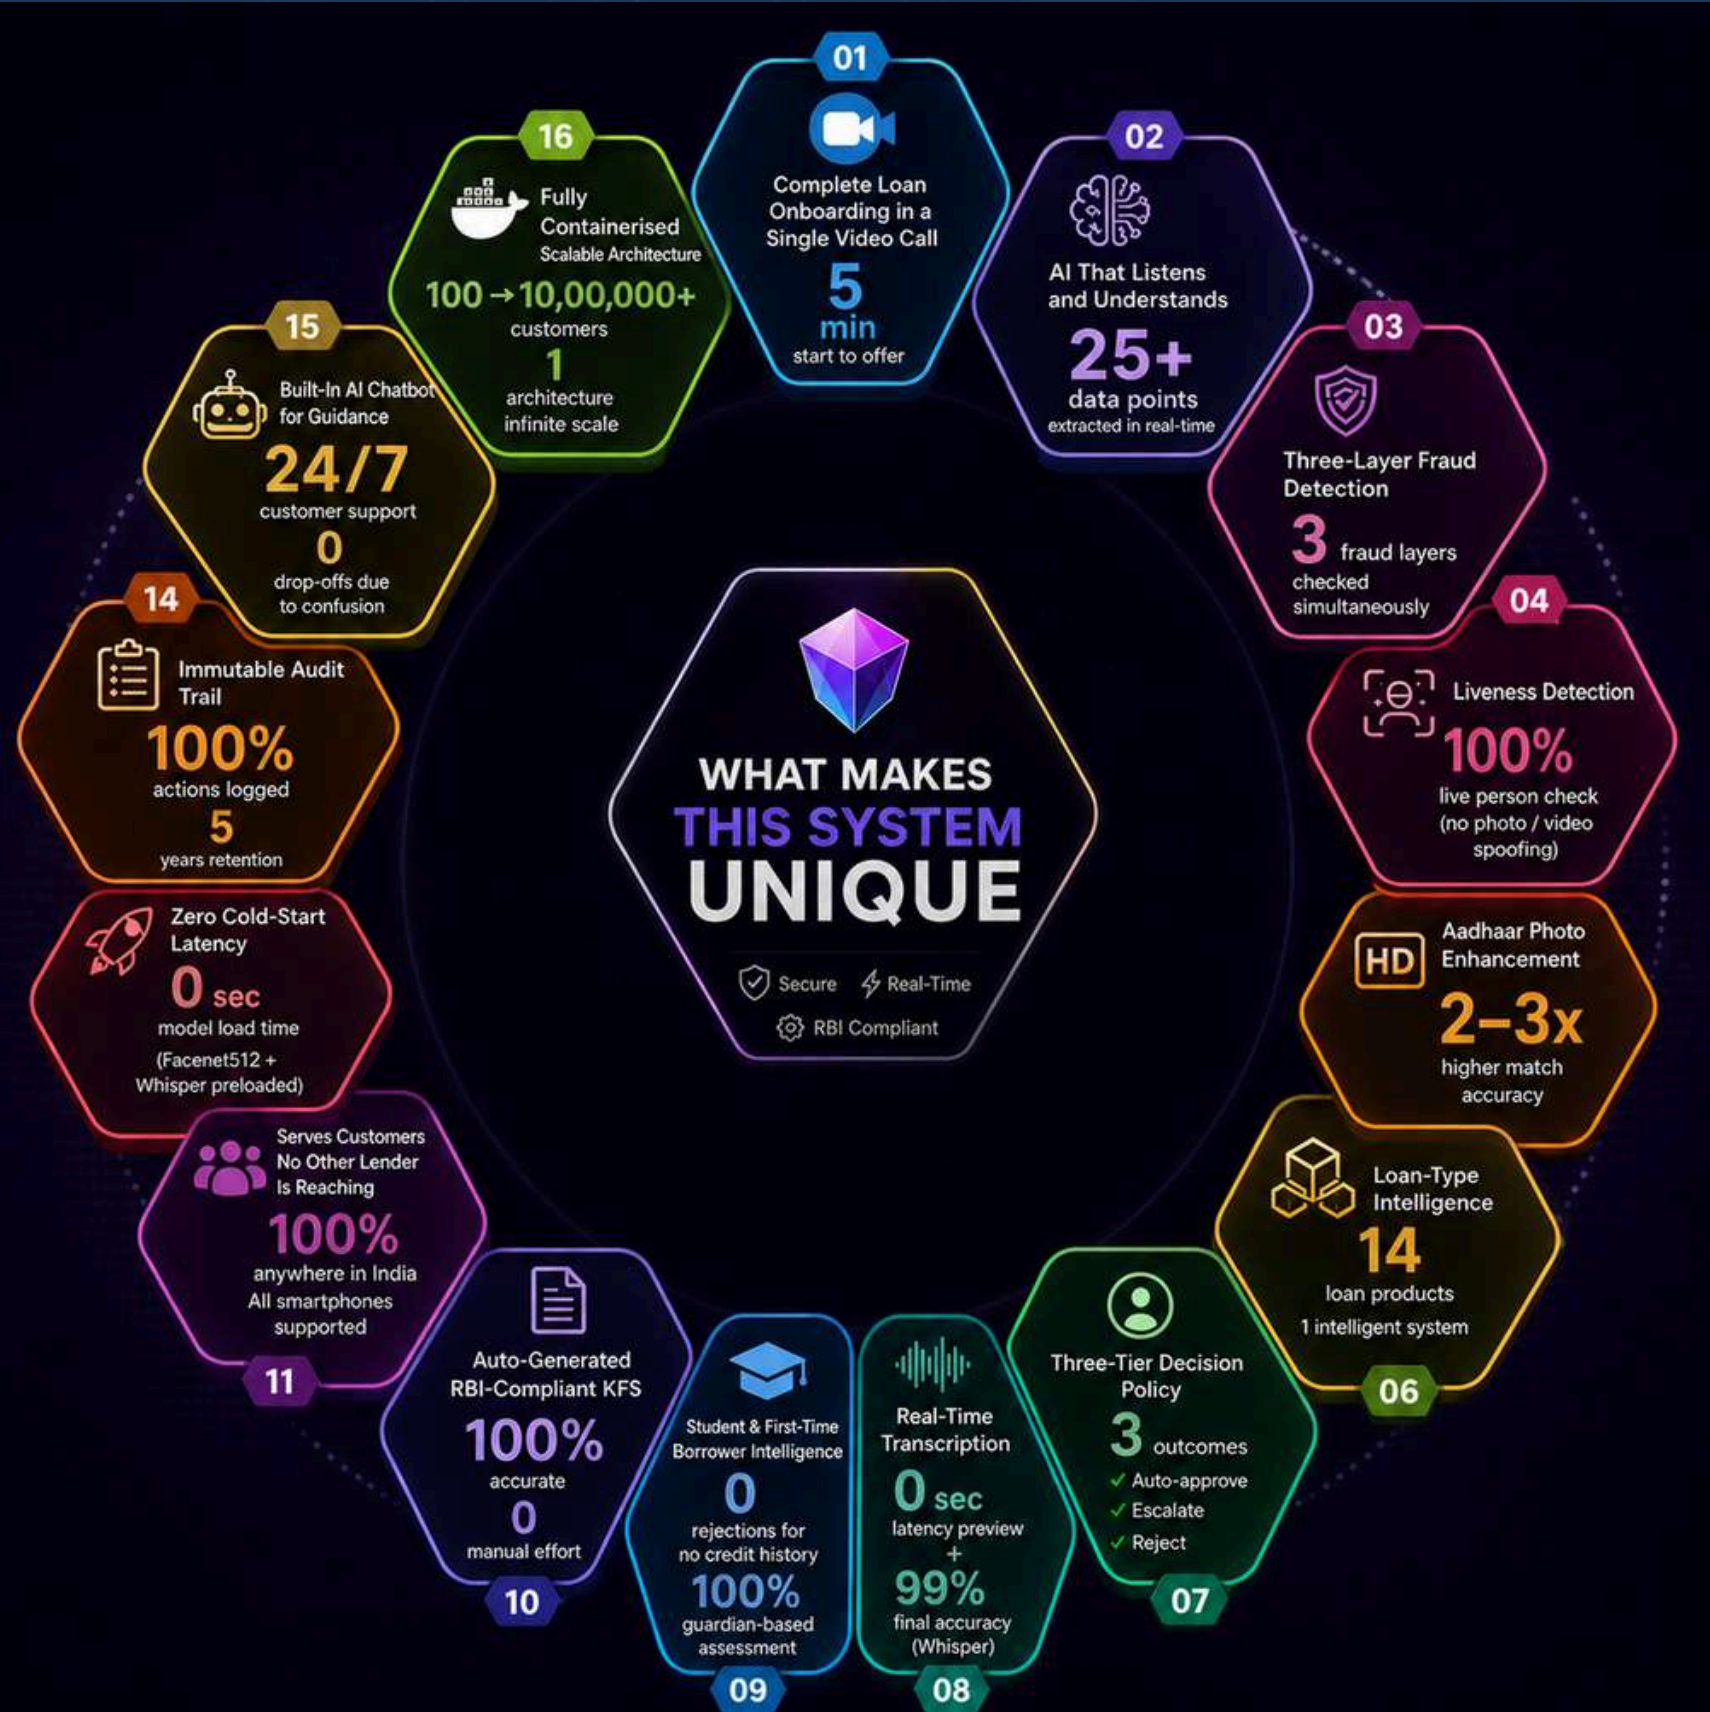

Today, applying for a loan means filling long forms, visiting branches, and waiting days for approval. Customers drop off halfway because the process is frustrating and slow. Lenders have no way to verify who the customer really is — their age, location, or income — without manual checks. Fraud slips through because digital forms have no real-time identity validation. KYC is still largely done by human agents, making it expensive and unscalable. And by the time a decision is made, the customer has already moved on to a competitor.

We replace all of that with a single AI-powered video call.
